ACKNOWLEDGEMENT

A big thank you goes to the dedicated HCP Regional Office Teams, County Health Departments and County Public Health Agencies for collecting and entering HCP CHIRP Data.

Special thanks to CDPHE, EPE Branch - Ashley Juhl and Barbara Gabella for data analysis; Paul Gillenwater and Sue Dabiri for preparing HCP CHIRP data.

Lynn Bindel for coordinating Medicaid and CHP+ data;
Ricky Toliver for analysis of Colorado Child Health Survey data; Emily Fields for preparing Newborn Hearing Screening data and Stephanie Lauer, Laura Zuniga and Shirley Babler for preparation of this report.

Summary

The purpose of this report is to provide data to assist local communities and regions with assessment, planning and evaluation for Maternal and Child Health (MCH) Operational Planning and MCH/HCP Reporting for HCP Contracts and Scope of Work.

It is hoped that these data will be helpful when local communities are reviewing HCP care coordination and “ease of use” for health care services and community services for CSHCN and their families.

In 2001, MCH established six national outcome measures to build a comprehensive coordinated system of care for CSHCN. The Children with Special Health Care Needs Unit at the Colorado Department of Public Health and Environment (CDPHE) addresses these outcome measures through three programs:

1. The Health Care Program for Children with Special Needs (HCP) at state and local community level.
2. The Newborn Screening Program at state and local level in collaboration with the Colorado Hospital Association and the Colorado State Laboratory.
3. The Medical Home Initiative for all children in Colorado in collaboration with The Colorado Department of Health Care Policy and Finance (HCPF).

HCP serves children and their families in Colorado’s 64 counties with contracts with 14 Regional Offices, 3 County Health Departments and 39 County Public Health Agencies (former County Nursing Services).

Data for CSHCN can often be very limited due to lack of data sources for this sub-population of all children plus confidentiality when small numbers are identified. Data sources used for this report include U.S. Census data, hospital discharge data for newborn hearing screening, Medicaid and CHP+ data (public health insurance), HCP CHIRP (CSHCN Early Detection and Hearing Intervention EDHI database), and the Colorado Child Health Survey. When data is for all children it may or may not represent CSHCN but can provide insight to inspire a need for further investigation for data sources specifically for children with special needs.

National Outcome Measures for CSHCN, Medical Home Strategies and Additional Data)

National MCH Outcome Measures:

- 1) Families of children with special health care needs will partner in decision making at all levels, and will be satisfied with the services they receive.
- 2) All children with special health care needs will receive coordinated on-going care within a medical home.
- 3) All families of children with special health care needs will have adequate private and/or public insurance to pay for the services they need.
- 4) All children will be screened early and continuously for special health care needs.
- 5) Community based service systems will be organized so families can use them easily.
- 6) All youth with special health care needs will receive the services necessary to transition to all aspects of adult life, including adult health care, work and independence.

HCP Strategies for Championing a Medical Home Approach for CSHCN:

- 1) Providing HCP Care Coordination in collaboration with the child's PCP/Medical Home.
- 2) Collaborating with Community Partners for Easy to Use Services and including family leaders as a priority partner.

Overview Of Colorado

Colorado is the eighth largest state geographically. Colorado is 104,247 square miles, 387 miles from East to West and 276 miles from North to South. The eastern half of the state has high flat plains and rolling prairies that gradually rise westward to the foothills and the higher ranges of the Rocky Mountains. The Continental Divide runs from North to South through East Central Colorado and bisects the state into Eastern and Western Slopes. The area from North to South just East of the foothills is known as the Front Range.

The state can be divided into four distinct regions often based on high mountain passes: the Front Range, the Western Slope, the Eastern Plains and the San Luis Valley. Close to 82 percent of Colorado's population lives in the Front Range which includes the metropolitan areas of Denver, Aurora, Boulder, Ft. Collins, Greeley, Colorado Springs, and Pueblo. The San Luis Valley in the southern part of the state is the region with the smallest population, with about 46,000 residents. Over fifteen percent of Colorado's residents are considered rural, living outside urban areas.

*Colorado has more counties identified as "pioneer" counties than rural counties. The Rural Urban Commuting Areas (RUCA) and the U.S. Census Bureau both use criteria to determine "pioneer" counties. The following Colorado Counties currently have the designation: Jackson, Moffat, Rio Blanco, Hinsdale, Mineral, Gunnison, Saguache, Custer, San Miguel, Dolores, San Juan, Costilla, Las Animas, Huerfano, Baca, Bent, Kiowa, Cheyenne, Kit Carson, Lincoln, Yuma, Washington and Sedgwick.

Population Statistics

Estimating % of Population of CSHCN

Colorado uses the broad definition of Children with Special Health Care Needs (CSHCN) as defined by the Maternal and Child Health Bureau (MCH) as “children who have or are at increased risk for a chronic physical, developmental, behavioral, or emotional condition and who also require health and related services of a type or amount beyond that required by children generally.”

Using this broad MCH definition, 17.6 percent of all children in Colorado ages 1-14 have a special health care need based on results from the Colorado Child Health Survey (CHS) for 2004-2007 combined.

In Colorado, there are an estimated 162,000 children ages 1-14 with a special health care need. This number (162,000) is only an estimate and is not an exact count of children with special health care needs in the state.

County population data for children ages 1-14 multiplied by 17.6 percent equals the estimated number of children 1-14 who have special health care needs in your county. For example: $30,000 \times .176 = 5280$. Estimates are less precise in counties with small populations.

When you apply the 17.6 percent to children in your county, ages 1-14, please remember the result is only an estimate. It does not represent the exact number of children in your community/county.

Population By Age

Projected Population by Age Group in Years for Adams County, 2008

Colorado Children's Public Health Insurance

Colorado Health Institute
March, 2009

COLORADO CHILDREN'S HEALTH INSURANCE

2009 Update

The large number of children lacking health insurance in Colorado (approximately 153,000) has resulted in a growing interest among policymakers and others to find ways to extend coverage to as many children as possible within current fiscal constraints. To evaluate all available policy options, it is necessary to develop accurate and reliable estimates of the size and household characteristics of Colorado's uninsured children. Currently, the Medicaid and the Child Health Plan Plus (CHP+) programs provide publicly financed health insurance to a large number of low-income children in Colorado,¹ although a significant number of uninsured children are eligible for but not enrolled in these programs. The extent to which children are eligible but not enrolled in Medicaid and CHP+ varies by county—a fact that has implications for strategies for enrollment efforts.

Over the past several months, the Colorado Health Institute (CHI) has conducted analyses relating to children's health insurance coverage. This brief summarizes these analyses and includes a discussion of:

- The number of uninsured and privately insured children in Colorado based on reported family income;

- The number of uninsured children in Colorado (at the state and county levels) who are eligible but not enrolled in Medicaid and CHP+; and,
- A subset of uninsured immigrant children who are currently ineligible for Medicaid or CHP+.

The primary data source used for this analysis was the U.S. Census Bureau's Current Population Survey (CPS), March Supplement, averaged over a three-year period from 2005-07. The CPS is a sample survey of approximately 4,000 Colorado households conducted every March. All data are self-reported.

Please see the Methods and Limitations section at the end of this brief for a description of how the estimates were calculated and the limitations of the data.

Estimates of Colorado's insured and uninsured children

From 2005-07, the majority of Colorado's 1.3 million children were covered by private insurance. In addition to these 855,000 children, an estimated 247,000 had other types of insurance (largely Medicaid and CHP+), while more than 153,000 were uninsured (Table 1).

Table 1. Colorado children ages 0-18 by insurance status, family income and documentation/citizenship status, 2005-07 average

Family income (percent of FPL) ^a	Uninsured ^b		Privately insured		All other insurance ^d	Total

NOTES TO TABLE I

a. The Federal Poverty Level (FPL) in 2007 was \$20,650 for a family of four.

b. The health insurance coverage question on the CPS asks about coverage over the entire prior calendar year. Parents of those children counted as uninsured indicated their children had no source of coverage (public or private) for the entire previous calendar year. Research, however, has shown that the CPS more closely approximates uninsured status at a point in time, e.g., March, rather than uninsured status for an entire calendar year.

c. Includes estimated number of undocumented children and documented non-citizen children who have resided in the U.S. for fewer than five years.

d. Estimates in this column are included for informational purposes; they do not include confidence intervals due to the instability of the estimates. Results should be interpreted accordingly.

Source: CHI analysis of the 2006-08 Current Population Surveys (covering CYs 2005-07)

Included among the uninsured were approximately 21,000 children who lacked immigration documentation or who had not resided in the United States legally for at least five years, the amount of time required for legal immigrants to be eligible for Medicaid or CHP+ coverage. Of these children, an estimated 8,000 had private health insurance coverage.

Children eligible but not enrolled

Of the approximate 153,000 uninsured Colorado children ages birth-18 years, CHI found that more than 78,000 were eligible for but not enrolled in the Medicaid and CHP+ programs. On average, between 2005 and 2007, nearly 48,000 children were eligible for the Medicaid program but not enrolled and approximately 31,000 were eligible but not enrolled in the CHP+ program (Table 2). These estimates include only uninsured children who were U.S. citizens or documented non-citizens who had resided in the country for five or more years and met income guidelines.

Table 2. Uninsured Colorado children ages 0-18 years eligible but not enrolled (EBNE) in Medicaid or CHP+, 2005-07 average

	Estimate	95% Confidence interval (+/-)
EBNE Medicaid	47,604	11,425
EBNE CHP+	30,626	8,619
Total EBNE	78,230	

Source: CHI analysis of the 2006-08 Current Population Surveys (covering CYs 2005-07)

County-level estimates of EBNE children

Of the estimated 258,000 children eligible for Medicaid in CYs 2005-07, approximately 82 percent (211,000 children) were enrolled (Table 3). The percentage of Medicaid-eligible children enrolled ranged from 35 percent in Pitkin County to 87 percent in Prowers County.² Because both Pitkin and Prowers counties (and many other counties in Colorado) have small populations of children compared to large urban counties such as Denver and Arapahoe, the potential for misspecification of enrollment rates is amplified. For example, Pitkin County had the lowest Medicaid enrollment rate but also accounted for less than .01 percent of all eligible but not enrolled children statewide (figure not displayed). CHI advises that in counties with small population sizes, caution be used in interpreting the rates displayed in Tables 3-5.

CHP+ enrollment rates for eligible children ages 18 years and younger were lower than Medicaid rates with 60 percent (45,000) of eligible children enrolled statewide. Among the counties, estimated enrollment rates for CHP+ ranged from a low of 24 percent in Pitkin County to a high of 77 percent in Mesa County (Table 4).

Also see the Colorado maps showing Medicaid and CHP+ enrollment by county on pages 11 and 12.

Sources: CHI analysis of the 2007 American Community Survey and 2006-08 Current Population Survey (covering CY 2005-07).

Examining the two programs together (Table 5), CHI found that nearly one-quarter (23%) of eligible Colorado children were not enrolled in Medicaid or CHP+ during the time period studied. Pitkin County

had the lowest joint enrollment rate (30%), with approximately 136 out of 450 eligible children enrolled in Medicaid or CHP+. Prowers County had the highest enrollment rate at 84 percent.

Sources: CHI analysis of the 2007 American Community Survey and 2006-08 Current Population Survey (covering CY 2005-07).

Table 6. Number of uninsured, documented non-citizen children (ages 0-18) in Colorado ineligible for Medicaid or CHP+ with fewer than 5 years of residency in the U.S., CY 2005-07 average

	Population estimate	95% confidence interval (+/-)
Eligible for Medicaid	5,124	3,711
Eligible for CHP+	*	*
Total	8,375	4,418

NOTE: Includes all documented non-citizen children ages 0-18 years who have resided in the U.S. for fewer than 5 years. Includes children who were uninsured but eligible for Medicaid and CHP+ based on age and income guidelines. Analysis assumes that non-citizen children legally residing in Colorado did not experience a change in documentation status during their residence in the United States.

* Estimates are statistically unstable due to small numbers of observations.

Source: CHI analysis of the 2006-08 Current Population Survey (covering CY 2005-07)

In Tables 3-5, the statewide Medicaid and CHP+ enrollment estimate displayed in the last row of Column B was calculated using a 36-month average of monthly caseload figures from the Colorado Department of Health Care Policy and Financing (HCPF). County enrollment (displayed in all other rows of Column B) was determined by applying each county's proportion of all children enrolled for at least one day ("ever enrolled") in FY2006-07 to the statewide 36-month caseload average total. (Please refer to page 10 for additional details about this calculation method.)

Uninsured, ineligible non-citizen children

Until February 2009, federal law prohibited states from enrolling non-citizen children with legal documentation who met age and income guidelines for Medicaid and CHP+ but who had not resided legally in the United States for at least five years. Recent legislation passed by Congress³ eliminates this five-year waiting period for legal immigrant children and provides states with the option of enrolling these children. Although Colorado has not changed eligibility guidelines, CHI was asked to estimate the impact of lifting this time-in-country requirement. The analysis found a relatively small number—an estimated 8,000 Colorado children that fit into this category (Table 6). Because the sample size was quite small and had a large margin of error, this number should be interpreted with caution. Estimates for this population could range from as few as 4,000 children to as many as 13,000.

Methods and Limitations

Health insurance status

Research comparing survey data from the CPS and administrative data from the Centers for Medicare and Medicaid Services suggests that the CPS consistently undercounts the number of people enrolled in Medicaid. Undercounting the Medicaid population could have the effect of overestimating uninsured and privately insured populations.⁴ CHI adapted methods used by other researchers to adjust for the Medicaid and CHP+ "undercount" and found that underreporting among children resulted in an approximate 12 percent decrease in the estimated number of uninsured children.⁵ The specific steps followed to adjust for the Medicaid and CHP+ undercounts are described in a recent CHI presentation.⁶ CHI staff would be pleased to provide additional details upon request.

Citizenship and documentation status

The CPS contains variables on citizenship but not on documentation status. Based on methods used by the Urban Institute, CHI assumed that 41.5 percent of non-citizen children were undocumented.⁷ From the remaining group of non-citizen children, CHI removed any children from the estimate who had resided in the United States fewer than five years.

Notes to tables 1, 2 and 6

Tables 1, 2 and 6 include a column for a population estimate with an accompanying 95 percent confidence interval.⁸ Because of the very small number of

observations on which some of these estimates are based, CHI combined results from the three most recent CPS surveys (2006-08, covering calendar years 2005-07) to produce a more stable estimate. In spite of using a 3-year average and reducing the margin of error, some variables still have a very small number of observations on which to calculate an estimate; therefore we encourage the reader to use the estimate prudently.

Notes to tables 3-5

To determine the statewide estimate for the number of children who were eligible but not enrolled in Medicaid and CHP+, CHI used the results of its CPS-based analysis reported in Table 2. To determine the distribution of these children across Colorado's 64 counties, CHI used methods recommended by the State Health Access Data Assistance Center (SHADAC) at the University of Minnesota. SHADAC proposed using county population estimates derived from the American Community Survey (ACS)⁹ and uninsured rates derived from the Current Population Survey (CPS) to derive the number of EBNE children in each county. Additional details about this calculation are available upon request.

Specific methods used to calculate the estimates contained in Tables 3-5 included:

- CHI uniformly adjusted the eligible but not enrolled county estimates downward by 12.3 percent to adjust for the Medicaid undercount.
- CHI was not able to provide confidence intervals for the county eligible but not enrolled estimates due to the fact that the estimates were derived from multiple data sources.
- The Medicaid and CHP+ enrollment estimates displayed in Column B of Tables 3-5 were calculated using official statewide caseload figures as well as county "ever enrolled" data provided by the Department of Health Care Policy and Financing. Official caseload numbers summarize children who were enrolled based on 12 months of enrollment similar to a full-time equivalent (FTE) calculation (for example, two children who were each enrolled for six months would be counted as one enrollee). Official caseload numbers, however, are only available at the state level. To estimate county-level

caseload numbers, CHI used "ever enrolled" data to calculate each county's percentage of the state's "ever enrolled" total. These data summarize the number of individual children who were enrolled in Medicaid for at least one day during the fiscal year. CHI then applied each county's percentage of "ever enrolled" children to the official statewide caseload number.¹⁰ The resulting county-level caseload estimates are summarized in column B.

- Because enrollment data were unavailable for a few small counties, the sum of the counties does not equal the state enrollment totals in Tables 3-5.

For more information

CHI welcomes the opportunity to discuss any questions this document may raise or to provide additional information about the methods, data sources or assumptions. Please contact Jeff Bontrager, senior research analyst, at 303.831.4200 x 205 or info@coloradohealthinstitute.org.

Data online

The county and state estimates included in Tables 3-5 are available for download in Excel format on CHI's Web site. Tables, maps, and graphs of the data are also available online.

2. Click on "Uninsured, Health Coverage and Access"
3. Click on "Eligible but not enrolled children"

Endnotes

¹ Currently, children 5 years old and younger with family incomes at or below 133% of the federal poverty level (FPL) are eligible for Medicaid, whereas children ages 6 to 18 are eligible if their family income is at or below 100 percent of FPL. Children in families with incomes that are higher than the Medicaid limits but at or below 205% of FPL are eligible for CHP+. In 2009, the FPL for a family of four is \$22,050. Additional eligibility guidelines are discussed in this paper.

² Numbers for some counties were not available.

³ Federal legislation passed by Congress in February 2009 reauthorized the State Children's Health Insurance Program (SCHIP), in Colorado known as Child Health Plan Plus (CHP+).

⁴For more information on adjusting for the Medicaid and CHP+ undercount and other issues related to the CPS, see C. Hoffman and J. Holahan, "What is the Current Population Survey telling us about the number of uninsured?" available from the Kaiser Commission on Medicaid and the Uninsured at <http://www.kff.org/uninsured/upload/7384.pdf>.

Institute, New Federalism: Series B, No. B-41. Available at <http://www.urban.org/UploadedPDF/310435.pdf>.

⁸A 95% confidence interval (also called a margin of error) is the range within which an estimate is expected to fall 95% of the time if random samples of the same population are taken at multiple times.

⁹The American Community Survey (ACS) is conducted annually by the U.S. Census Bureau to collect economic, social, demographic and housing information about U.S. communities. Additional information is available at <http://www.census.gov/acs/www/index.html>.

¹⁰The statewide caseload number used was the 36-month average of official monthly Medicaid and CHP+ caseload figures covering CY 2005-07 (the same period covered by the CPS).

Professional Shortage Areas

A Health Professional Shortage Area is a federal designation status of a community that has insufficient primary care, oral health, and/or mental health capacity to meet the needs of the population. A *geographic* designation is created by determining the ratio of providers in direct outpatient care to the population of a health service area that is not living in an institutional setting. A *low income population* designation is created by determining the ratio of providers in direct outpatient care serving patients who are on Medicaid or who are low income and uninsured to the population of a health service area that has incomes below 200% of federal poverty. The ratios to qualify are as follows:

Primary Care Provider Ratios

Geographic Area $\geq 3500:1$
Geographic Area with High Needs $\geq 3000:1$
Population Group $\geq 3000:1$

Mental Health Provider Ratios

Geographic Area
 $\geq 1:30,000$ psychiatrists, or
 $\geq 1:9,000$ core mental health professionals (Appendix 1E), or
 $\geq 1:20,000$ psychiatrists and $\geq 1:6,000$ core mental health professionals

Geographic Area with High Needs
 $\geq 1:20,000$ psychiatrists, or
 $\geq 1:6,000$ core mental health professionals, or
 $\geq 1:15,000$ psychiatrists and $\geq 1:4,500$ core mental health professionals

Population Group
 $\geq 1:20,000$ psychiatrists, or
 $\geq 1:6,000$ core mental health professionals, or
 $\geq 1:15,000$ psychiatrists and $\geq 1:4,500$ core mental health professionals

Dental Health Provider Ratios

Geographic Area $\geq 1:5000$
Geographic Area with High Needs $\geq 1:4000$
Population Group $\geq 1:4000$

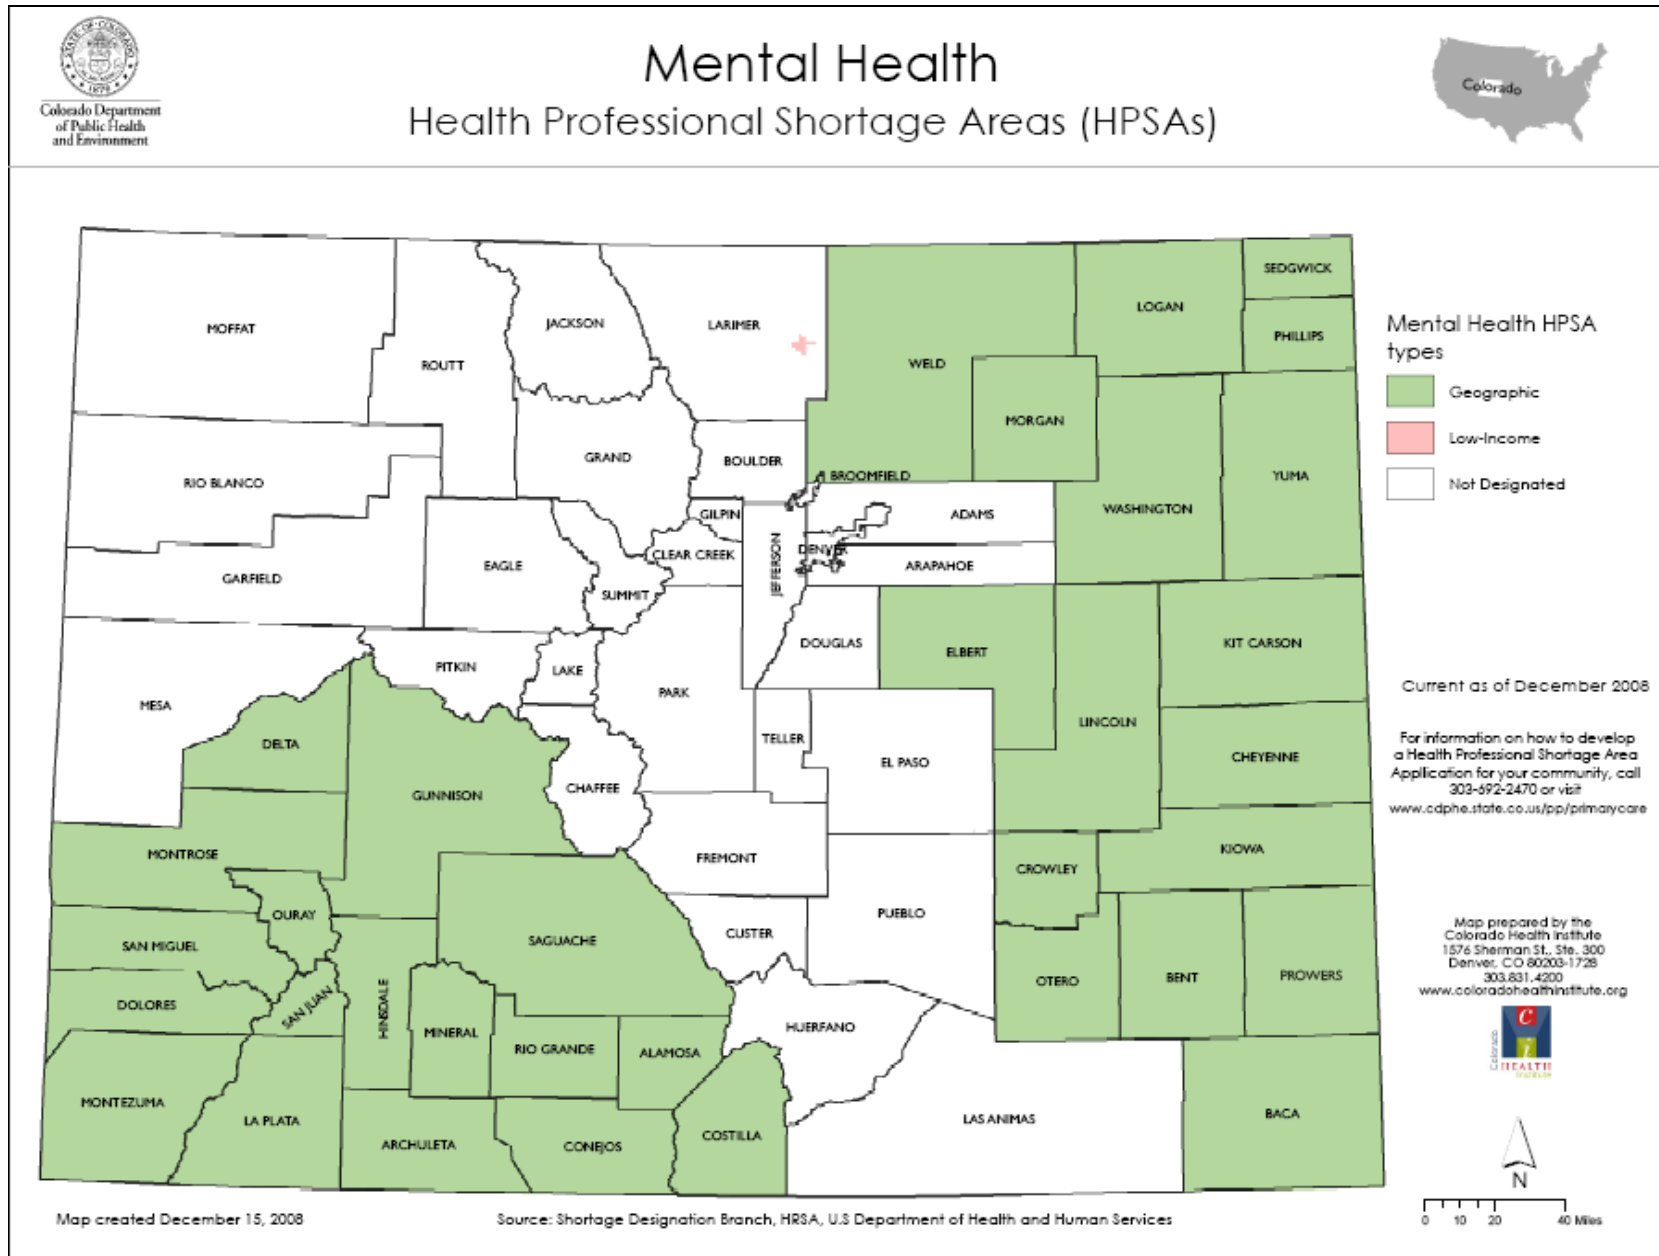

Not all areas of the state with a shortage currently have a designation. Because a designation must be applied for, and renewed every three years, there are always parts of the state pending review for new or updated designation status.

There are currently 32 federal programs, three state programs, and a growing number of private programs that use shortage designation to either determine eligibility for awards or determine rank of awards by relative need, for granting purposes. Further, providers in active HPSAs may be eligible for increased payments from Medicare and Medicaid. For more information on the designation process visit:

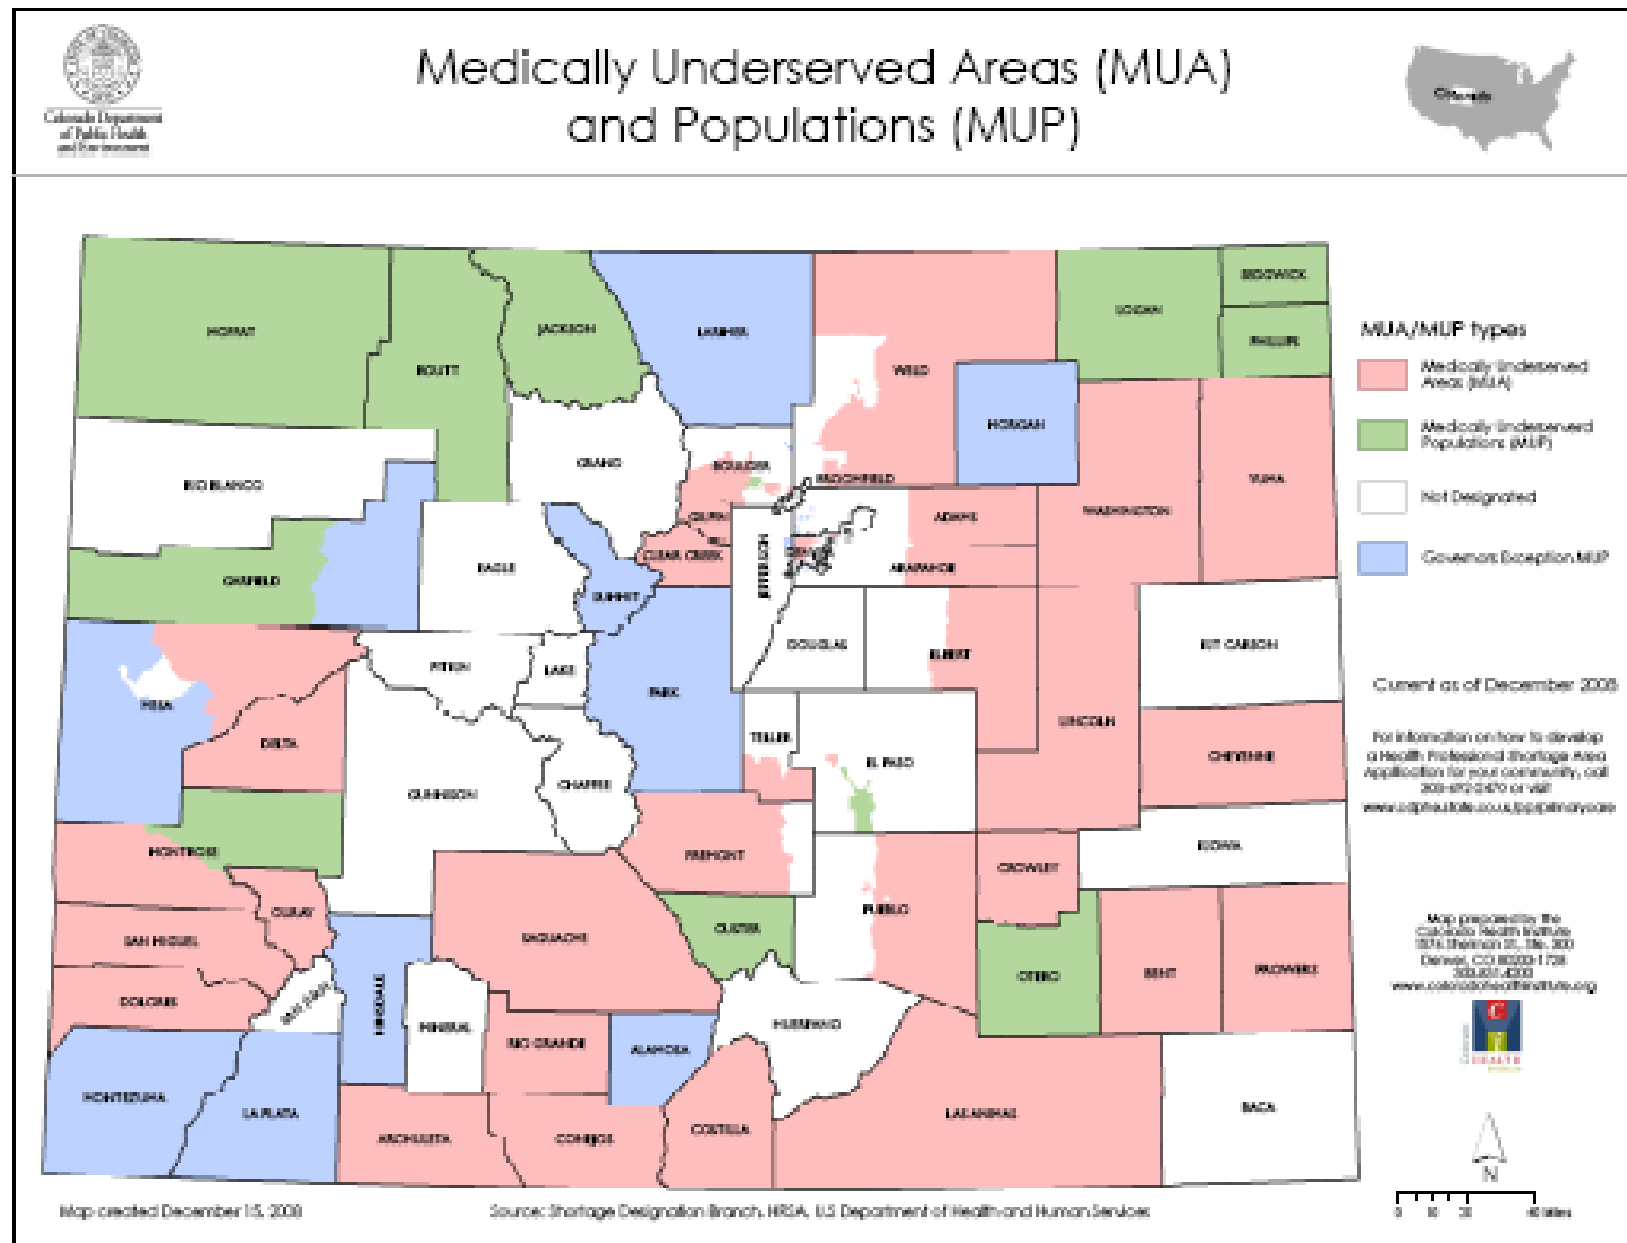

<http://www.cdphe.state.co.us/pp/primarycare/index.html>

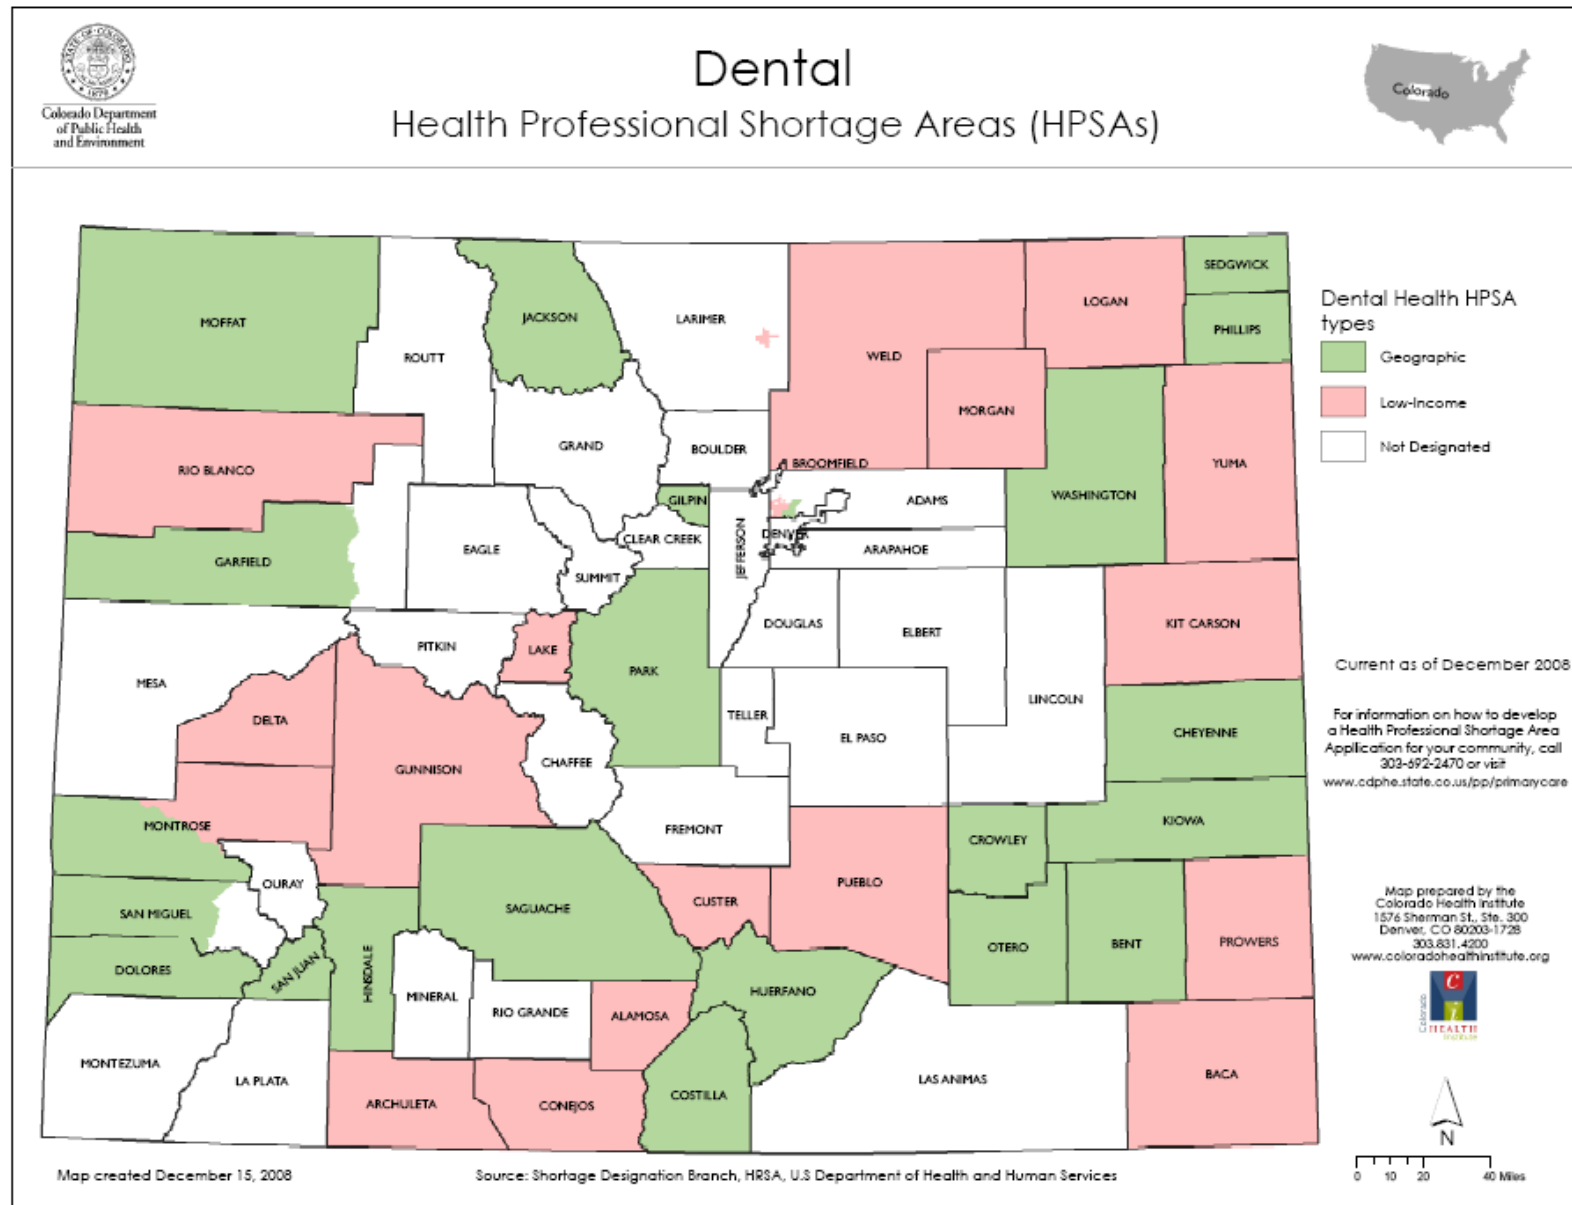

Mental Health Professional Shortage Areas (MHPSA)

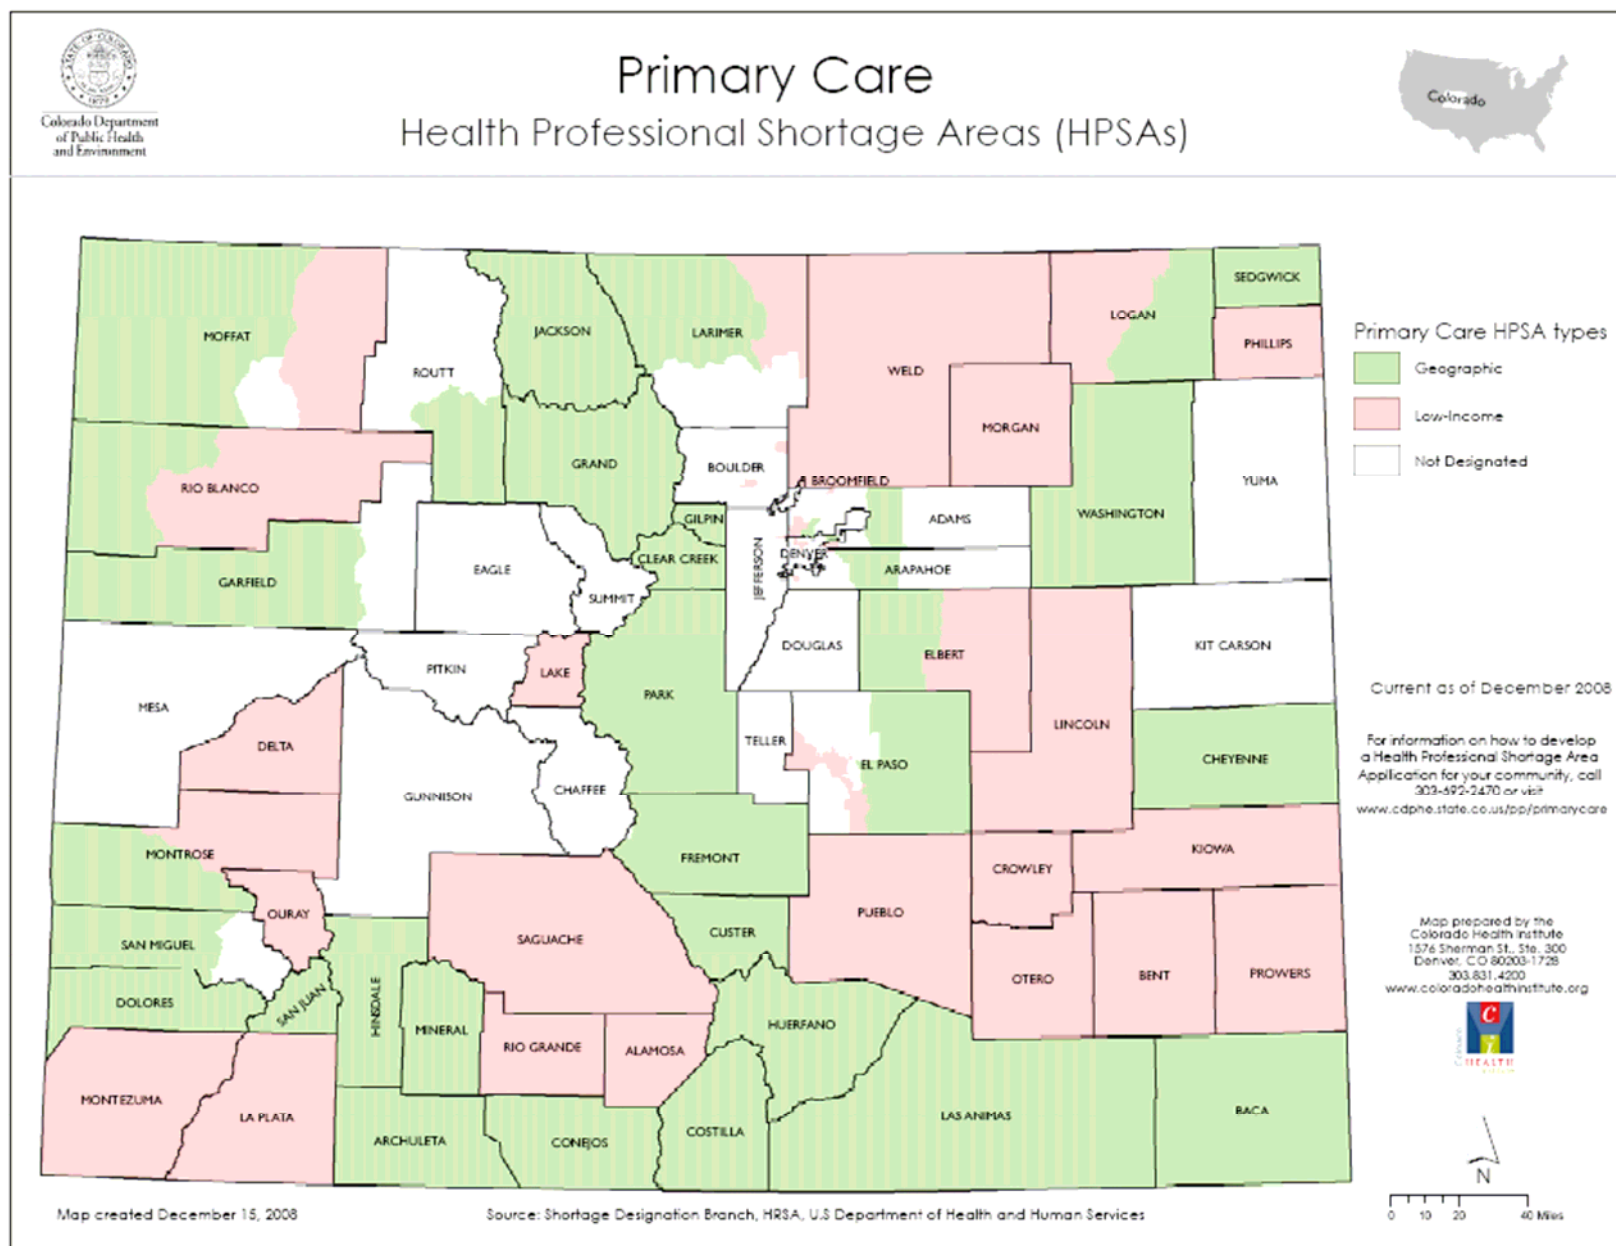

Medically Underserved Areas (MUA) and Populations (MUP)

Dental Health Professional Shortage Areas (DHPSA)

Primary Care Health Professional Shortage Areas (PCHPSA)

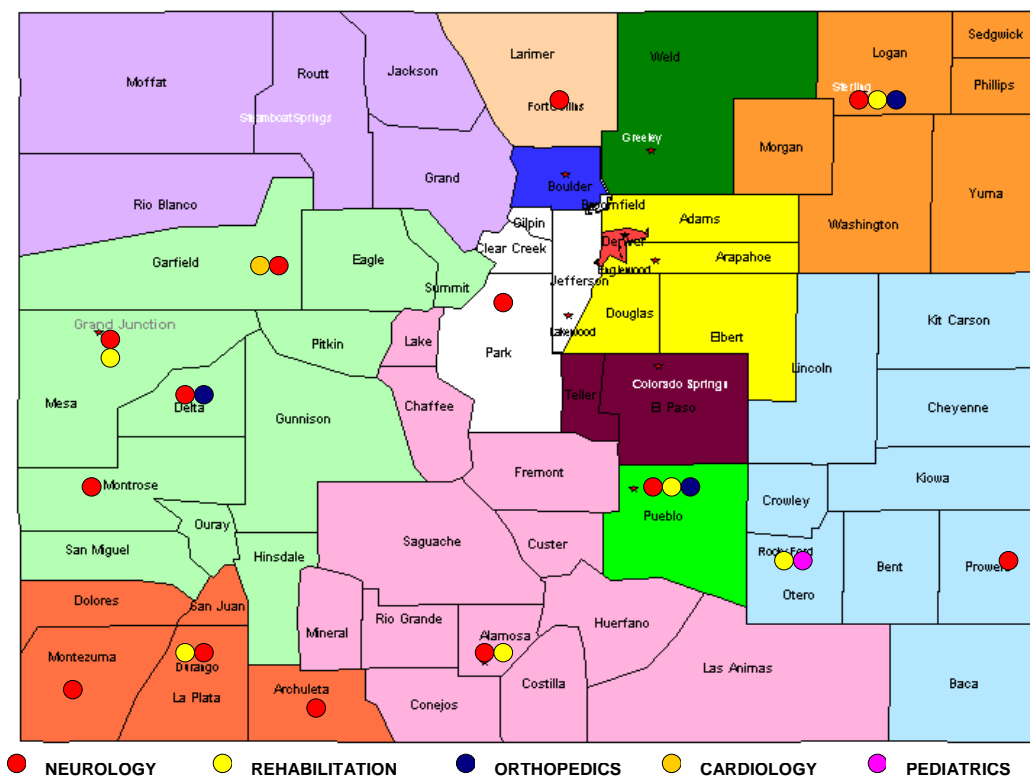

HCP Specialty Clinics

HCP sponsored ninety-nine pediatric specialty clinics from October 1, 2007 to September 31st, 2008 throughout underserved areas of Colorado. Nearly all pediatric specialists in Colorado are located in the greater Front Range area. HCP specialty clinics bring these much sought after pediatric specialists to rural and underserved locations in Colorado.

Specialty Clinic Location Overview

There were sixty-four HCP pediatric neurology clinics held between 10/1/07 and 9/30/08 averaging just under ten patients per day (9.84 completed appointments). The eighteen pediatric rehabilitation clinics averaged under 20 patients per day (19.28) as did the eight pediatric orthopedics clinics (18.5). General pediatrics and pediatric cardiology are provided at one location each and averaged 6.5 and 8.8 patients per day, respectively.

Pediatric neurology clinics had more patient visits between 10-1-07 and 9-30-08 than all other specialty clinics combined (630 and 565, respectively).

HCP specialty clinics provide specialty care to underserved populations and see all children regardless of their insurance status. Medicaid covered 60% of children attending our clinics followed by private insurance that covered 23% of children seen. Those without any insurance represented approximately 5% of children seen.

All HCP specialty clinic data were collected from "HCP Individual Clinic Data Collection Tool(s)" submitted to the state HCP office after each specialty clinic from 10/1/07 to 9/31/08.

Visit tables: "New" indicates a visit by a patient who has not been seen at this clinic previously. "Follow-up" indicates the visit was for a patient who had attended this clinic at least one other time during the same calendar year. "Return" indicates the visit was for a patient who was seen at this clinic in a previous year.

Insurance tables: "Uninsured" indicates the patient had no insurance coverage at the time of the visit. "Unknown" indicates the patient's insurance status was unknown at the time of the visit or the site did not document insurance status in the Data Collection Tool. "Private" indicates the patient had private insurance at the time of the visit. "Medicaid" indicates the patient had Medicaid coverage at the time of the visit. "CHP+" indicates the child had Child Health Plan + coverage at the time of the visit. "Med & Private" indicates the child had both Medicaid and private insurance at the time of the visit.

Diagnostic and Evaluation (D&E) Clinics

The D&E Clinic Program ascribes to the philosophy that services must be community-based, family-centered and culturally competent. These three concepts are the core values of the D&E Clinic Program. There are eight clinics found throughout the state and serve a broader community base as each is encouraged to regionalize their efforts in seeing children from the area outside their immediate community. These communities include: Otero County, Pueblo County, El Paso County, Fremont County, Weld County, Denver County, San Juan Basin and Mesa County.

The data provided reports the number of children seen and assessed in the eight clinics in the fiscal year, October 1, 2007 through September 30, 2008. This data identifies the primary diagnosis for those children seen in this time and the need for services to be made available to children with these diagnoses. One of the primary diagnoses is autism or autism spectrum disorder as well as expressive language delays. We know that children identified early can have services provided that could potentially mitigate the need for more expansive and costly services for children as they grow. Communities could use this data to identify a potential unmet need; i.e. speech and language and therapies specific to the needs of children with autism. This could be an example as to how to use this data.

Diagnostic & Evaluation Clinic Annual 2008 Report

Summary of All Clinics

March, 2009

Total # of Clients Seen For Evaluation: 304

Gender Breakout		Age Breakout

2	Northern Colorado Medical Center (Greeley)
28	Pueblo Autism Clinic (Dr. Elizabeth Ehrhardt)
123	Sewall D&E Clinic (Denver)
4	Upper Arkansas Clinic (Fremont County)

Newborn Hearing Screening

Newborn hearing screening data is sent from birthing hospitals to the Office of Vital Statistics at the Colorado Department of Public Health and Environment via the electronic birth certificate (EBC). A daily extract of the EBC data is sent to the Newborn Hearing Screening CHIRP electronic record for newborns who either miss or fail an initial hearing screen. A monthly report of these missed/failed screens is then generated from the Newborn Hearing Screening CHIRP and sent to a designated Hospital Hearing Screening Coordinator who provides information on rescreen results.

Colorado's goals are to screen 98% of all newborns, keep the "refer rate" (or number of children who fail the initial screen) around 4%, and follow-up on at least 85% of infants who fail their initial screen.

In an attempt to increase the state's percentages for hearing screening follow-up, regional Early Hearing Detection and Intervention (EHDI) teams are being established throughout Colorado. Each EHDI team will be comprised of the local Audiology Regional Coordinator, the county Healthcare Program for Children with Special Needs Team Leader(s), the regional Colorado Hearing Resource Coordinator (CO-Hear), a local parent of a child with hearing loss involved with the Hands & Voices support group, local birth hospital coordinator(s), and other key stakeholders in the community. The teams will provide training and support for each birthing hospital and identify and address potential gaps and solutions specific to each community.

County Public Health Agencies Priorities for 2009

County Public Health Agencies identify priorities as part of their annual planning for the calendar year. The County Public Health Nurses use past community needs assessment data and current knowledge of community needs to determine their priorities. These priorities determine lead work efforts in addition to the day to day activities and other contract agreements.

County Priorities 2009 Nursing Services

County	Priority #1	Priority #2	Priority #3	Others
Alamosa	Transition to LPHA by statute	Reduce STI rates	a) Breastfeeding promotion b) Employee wellness	Care coordination for children with special needs
Baca	Chronic disease	Tobacco/alcohol use by teens	pediatric dental care	
Bent	Access to care	Teen pregnancy rate	Obesity	
Chaffee	Immunizations	Communicable disease	Lack current MCH data	EPR; Adult tobacco prevention
Cheyenne	Chronic disease management	Tobacco/drug & alcohol prevention	pediatric dental care	
Clear Creek	Injury prevention rate children 0-19	Low birth weight	Cardiovascular disease risk in workforce population	
Conejos	Cardiovascular disease	Diabetes	Children with special needs	
Costilla	Obesity	Tobacco free campus	Medical home for HCP children	
Crowley				
Custer	Injury prevention rate children 0-19	Establish and maintain MRC unit	Immunizations	
Dolores	Substance abuse	Injury prevention	EPR	
Eagle	Access to health care	Communicable disease	Chronic disease prevention	
Elbert	Access to health care	Child/adolescent seat belt use	Obesity	
Fremont	Teen pregnancy	Obesity	Immunization	
Garfield	Suicide Prevention	Immunizations	Prenatal care	
Gilpin	MCH Service delivery	Community Health planning	Smoking cessation and prevention	

Grand	Access to care	Teen pregnancy rate	Prevention services	
Gunnison	Teen pregnancy	Access to care	Child well-being	
Hinsdale	Injury prevention	Access to oral health care	EPR	
Jackson	Child obesity	Access to care	Increase senior services	
Kiowa	Dental Care	Cancer	Substance use	
Kit Carson	Chronic disease prevention & control	Nurse home visitation for new parents	Children's health	Surge capacity for EPR, Environmental health incl. food safety, vector borne disease, lead and smoke
Lake	Teen pregnancy	Pediatric dental care	Obesity	
Lincoln	Expansion of women's health care	Community Assessment	Injury Prevention	
Mineral	Access to prescriptive drugs in the home	Cardiovascular health w/ focus on women	Increase HCP eligible children	
Montezuma	Teen pregnancy	Adolescent substance abuse	EPR	
Montrose	Access to care	Well-being of families	Immunizations	Chronic disease
Ouray	Dental Care	Decrease community tobacco use	Pandemic flu plan	
Park	Immunizations	Low birth weight	Injury Prevention in children	
Pitkin	Prenatal care	Access to dental care	Public Health Act 2008	
Prowers	Childhood obesity	Chronic disease	Adolescent health	
Rio Blanco	Communicable disease	Teen pregnancy rate	Childhood obesity	
Rio Grande	Immunizations	TB Control	International travel clinic	
Routt/Moffat	Access to care	Healthy aging	Maternal/ child health	

Saguache				
San Juan	Substance abuse in community	Health insurance for children	EPR	
San Miguel	Access to care	Substance abuse prevention	Chronic disease prevention	
Summit	Access to prenatal care	Awareness of health care services	EPR	
Teller				

This summary report was provided by The Office of Planning and Partnerships at CDPHE, April, 2009. Data was summarized from the Annual Plans submitted by County Public Health Agencies, January, 2009 for the calendar year of 2009.

HCP CHIRP Data

The following section contains data from the HCP CHIRP electronic health record. All data displayed is for the time period of October 1, 2007 to September 30, 2008.

These data only reflect the population of CSHCN served by HCP regional offices and are not directly comparable to other data sources including state and national surveys. These comparisons may be made as long as you understand the limitations of doing so. National and State surveys use a randomly selected sample that is statistically representative of the CSHCN population as a whole (this could be national, statewide, or an individual county). These data were not obtained through random sampling but are from those families and children in Colorado who HCP connected with at any time during the specified time period.

The purpose of this section is to present the data local HCP offices enter throughout the specified time period in a meaningful way.

These data can be used to:

- Describe the population each HCP region works with
- Identify sub-populations who may need further outreach efforts
- Identify strengths and weaknesses related to the functions of each HCP region
- Establish baselines
- Help make informed decisions about future goals and objectives in the planning process
- Support and describe local office activities when applying for grants
- Monitor the population reached by HCP
- Assist in the quality improvement process

The first set of tables titled "Colorado" is comprised of data from all HCP regions in Colorado for the specified time period. These may be used as a comparison point for each individual HCP region or to describe HCP local office effort as a whole throughout Colorado.

Each of HCP's fourteen regional offices have a subsequent set of tables devoted to data collected by HCP staff within that region.
